

DeltaGard® G

The granule insecticide

*that works hard
so you don't have to*

/// DeltaGard® G – small granules, big results.

DeltaGard G is a convenient granular insecticide with a broad label that provides effective, residual control of a wide variety of crawling pests. The granules are made with a natural carrier. When exposed to moisture, they quickly break apart and disappear releasing the active ingredient without staining surfaces or damaging plants. A type 2 pyrethroid, deltamethrin – the active ingredient in DeltaGard G – is a single, pure isomer that's 100% active with maximum power to kill pests at lower application rates than some other granule products. When your integrated pest management program calls for a contact granular insecticide, trust cost-effective DeltaGard G. It will work for you, your customers and your business.

/// *Makes pest control and prevention easier*

Broad-spectrum, residual control of:

- | | |
|----------------|--------------|
| // Ants | // Scorpions |
| // Cockroaches | // Spiders |
| // Crickets | // Ticks |

Please see product label for full list of pests.

/// *Flexible use directions*

You can apply DeltaGard G as a broadcast treatment, perimeter treatment, spot treatment and on interior landscapes.

Tick pressure has been on the rise in recent years as have tick-borne diseases.

DeltaGard G is a trusted choice for tick control. Scientific studies published in the *Journal of Economic Entomology* and the *Journal of Medical Entomology* show that a single application of DeltaGard G can result in complete control of black legged/deer and lone star ticks for up to 12 weeks!*

/// Easy to apply granules

The small, dense particles are easy to spread with a hand-held or walk-behind spreader and have virtually no odor or dust. They provide excellent penetration and coverage in thick mulch or thatch, placing more of the insecticide where it's needed. The light brown color blends with most landscapes and will not stain surfaces yet provides enough contrast to monitor the treatment for even coverage and less waste.

/// Low dose

Perimeter treatments require only 2 to 3 pounds of granules per 1,000 square feet applied as a 5 to 10 foot band around structures. Broadcast treatments require just 10 pounds of granules per 5,000 square feet of surface area.

/// Low dust

Some granule products will produce dust when applied. Our formulation is designed to minimize dust. That means less mess and less waste.

/// Low odor

Virtually no odor after application.

<i>Weight of DeltaGard G in pounds</i>	<i>Fill level for liquid measuring container (U.S. measure)</i>	<i>Fill level for liquid measuring container (Metric measure)</i>
1	1 ² / ₃ cups	380 ml
2	3 ¹ / ₄ cups	760 ml
3	5 cups	1,175 ml
4	6 ¹ / ₂ cups	1,530 ml
5	8 ¹ / ₄ cups	1,925 ml
